PROFESSIONAL SUMMARY

10+ years of experience building scalable web applications, AI/GenAI-powered SaaS products, and enterprise automation tools. Deep expertise in Python-Django backend systems, Agentic AI development using LangGraph, and LLM integration. Hands-on across the entire product lifecycle — from system design and backend engineering to cloud deployment on GCP. Currently building multiple AI-first SaaS products.

TECHNICAL SKILLS

Front-End: Bootstrap, HTML5, CSS3

Backend: Python-Django, Postgresql, Docker

Generative AI: Langchain, CrewAI, Langraph, VectocDBs(Pinecone)

Cloud(Deployment & Implementation): AWS & GCP

WORK EXPERIENCE

Tech Lead (AI & Web Applications), Boldtribe Innovations Pvt Ltd

Nov 2024 – Present

- Developed full backend APIs and full-stack doctor modules for the Zymedics health platform, incorporating AI-driven diagnostics and prescription generation.
- Led backend API development for Dubai based Islamic Insurance company, integrating AI features including recommendation systems, sales chatbots, and insurance planning tools.
- Mentored junior engineers and established standardized architectural patterns adopted organization-wide.
- Built and integrated Generative AI features into client products —including LLM-powered document processing, intelligent summarization, and AI-assisted workflows.
- Developed RESTful backend APIs with Django REST Framework, integrating third-party services, authentication systems, and data pipelines.
- Managed end-to-end project delivery: requirement analysis → system design → development → testing → GCP deployment → post-launch support.
- Collaborated with cross-functional teams (frontend, product, QA) to ship production-grade applications on schedule.

Individual Contributor, ConVoyage Systems Pvt Ltd

Sep 2020 – Nov 2024

- Led backend development for Fractional Investment platform Digishares.in using Django and Web3 technologies integrated via Infura.
- Architected secure smart contracts for trade execution and compliance.
- Instituted code review processes and security audits, reducing vulnerabilities and improving code quality.

Remote / Freelance, Software Developer — Web & NLP

April 2018 – March 2020

- Built an AI-powered Legal Document Abstraction Tool for PwC (via Neukelp LLP / IIT Bhubaneswar TBI), automating PDF parsing, clause extraction, and summarization using Python, Django, and NLTK — contributing to a Fortune 500 client engagement.
- Built and evaluated Named Entity Recognition (NER) models on legal text corpora to extract parties, dates, clauses, and obligations using NLTK and spaCy.
- Architected and developed a Reseller Management System for MarvinAI using Django — covering multi-tier user roles, inventory tracking, and analytics dashboards.
- Delivered weekly technical progress reports and maintained version-controlled codebases across all client engagements.

Full Stack Developer, SITSIndia

January 2015 – April 2018

- Designed and delivered full-stack web applications for clients across education, healthcare, and e-commerce verticals using Django, PHP, and WordPress.
- Built rapid web app prototypes for pre-sales demonstrations, reducing client decision cycles by offering functional proof-of-concepts.
- Led a small development team — handled sprint planning, task assignments, code reviews, and on-time project delivery.
- Implemented analytics-driven optimization using Google Analytics and Zoho Analytics, improving bounce rate, session duration, and conversion rates for client websites.

Web Developer, LIT Solution

January 2014 – January 2015

- Developed responsive web applications for 15+ clients, independently managing full-cycle development from requirements to deployment.
- Built a School Management Software in PHP5 covering admissions, attendance, results, and fee management modules.
- Managed WordPress installations, theme customization, and plugin integrations for multiple client projects.
- Improved website load speed and SEO rankings using Google Webmaster Tools, achieving measurable organic search gains for clients.

Management Trainee (IT Sales), AuroIN LLC

August 2013 – January 2014

- Handled client follow-ups, business communications, and CRM data management.
- Managed sales outreach targeting US and European markets for IT services and digital solutions.

EDUCATION

B.E. Electronics & Communication Engineering,	XII Science (CBSE)	X (CBSE)
Hi-Tech College of Engineering (BPUT) 2009 – 2013	Kendriya Vidyalaya, HPCL Jagiroad, Assam 2008	Kendriya Vidyalaya, HPCL Jagiroad, Assam 2006

PROJECTS

Takafulik — AI-Powered Islamic Insurance SaaS Platform

- Agentic AI workflows built with LangGraph for multi-step policy reasoning and claim assistance
- RAG pipeline over proprietary Takaful documents for grounded, compliant AI responses
- Multi-tenant Django architecture supporting multiple operators from a single codebase
- Full cloud deployment on GCP with CI/CD pipeline via GitHub

Tech Stack:

Python, Django, LangGraph, LLM APIs, RAG, PostgreSQL, GCP, Nginx, Gunicorn, Tailwind CSS

Zymedics — AI Health & Medical Assistant Platform

- Multi-agent architecture using LangGraph — triage, symptom analysis, and history agents working in orchestration
- LLM-powered medical document parser for lab reports, prescriptions, and summaries
- Secure Django backend with role-based access for patients, doctors, and admins
- Prompt engineering for safe, medically-grounded AI responses with fallback guardrails

Tech Stack:

Python, Django, LangGraph, LLM APIs, Prompt Engineering, PostgreSQL, GCP, Docker, Nginx

Pluxsor — AI-Powered SaaS Web Application

- AI agent integration using LangGraph for workflow automation
- Django-based subscription management with tiered pricing and usage limits
- HTMX-powered reactive UI for fast, lightweight frontend experience
- Deployed on GCP with Nginx/Gunicorn and automated SSL configuration

Tech Stack:

Python, Django, LangGraph, LLM APIs, PostgreSQL, HTMX, Tailwind CSS, GCP, Nginx

EiCoins — Crypto Fintech Web Application

- Django REST API backend with secure wallet and transaction modules
- Real-time portfolio tracking dashboard with React frontend
- Supabase integration for scalable, serverless data management
- Clean modular Django app architecture

Tech Stack: Python, Django, PostgreSQL, Supabase, React, JavaScript, GCP

Legal Document Abstraction Tool — PwC Engagement

Built an AI-powered document abstraction system to automate the analysis of large volumes of legal PDF contracts for a Fortune 500 client engagement. The NLP pipeline parsed PDFs, extracted structured data (clauses, parties, dates, monetary amounts, obligations), and generated concise human-readable summaries using NLTK. A Django backend managed document storage, search indexing, and REST API delivery. Also trained and evaluated Named Entity Recognition (NER) models on legal text corpora using spaCy.

Impact: Reduced manual legal document review time significantly, enabling the client's legal team to process and analyze large contract volumes at scale.

Tech Stack:

Python, Django, PostgreSQL, NLTK, spaCy, NER, PyPDF2/pdfminer, REST APIs, Git
